

# Why move from Excel to GeoticLog?

---

## Saving time is saving money

- **No needs to clean the DB** after every drilling campaign. You can create all of the personalized lists or dictionaries to avoid misspelling or wrong lithologies.
- You can create SQL DB so that everybody can use the same DB at the same time. **No need to compile the information once the DB is settled.**
- Logging with GeoticLog **avoid typical Excel mistakes** like duplicates, missing intervals, or main information.
- Create personalized exportation profiles to export the data the way you want.
- You can recreate your current Excel DB with GeoticLog personalized tables and import all of your information.

## Protect the integrity of your information

- Several tools and locks allow you to check your DB to make sure that you have all of the information you need. **Complete validation of the data entry.**
- Every sample is linked to one or several certificates and any changes on those certificates is recorded.
- You can produce **QAQC graphs and print logs** from your data.
- Prepare User or Groups rights profiles to avoid beginner loggers having access to all the information or deleting something crucial by mistake. **Protects the information.**

## Easy to use

Once the DB is ready it is really easy to handle GeoticLog. It can take less than a day to be able to use it (All basic functionalities).

## Save all of your information in one place

All of your photos, certificates, documents can be saved at the same place. Every item is renamed and saved into a corresponding folder. **No need to rename photos.**
